Bugs discovered:

- I found that for entering course grades that contain a decimal, the prompt would automatically quit and output many arbitrary numbers for the course grades and the averages (Shown below). I fixed the code by ensuring it checks for a valid integer between 0 and 100 and rejects numbers with a decimal point.

Questions for the customer

1. If an incorrect GPA (for example, 4.35) is input and an error message appears, does that mean that the user must input a valid GPA again, or does that imply that the report-generation process has to be aborted altogether?
2. Will future versions of the system require the support of the academic standing policies of different groups, like graduate students?
3. Do there exist any additional criteria that dictate Academic Probation/Suspension, i.e., full-time vs. part-time status, or does the calculation depend on the GPA only?
4. Should the academic standing be calculated only for this report or kept in the student data?
